

Parallel Traders Front End Update

Introduction

We want to re-design and redo the frontend of one of the pages on our current live platform.

Page: <https://paralleltraders.com/trading>

- Would you be able to go onto the site and use inspect/element to get all the sizing, fonts etc off this page?

Frontend code: Angular 11

What we want

- All the information on the page needs to be there (such as headings etc)
- We don't want to completely change this page, it is purely from a design point of view
- We need to keep the colours and fonts the same
- You don't need to change anything to do with the charting
- Only change the design of the trade execution tab, watchlist and past trade history.
- On this page each feature is on a separate card. We need to keep these cards separate as it helps with the mobile view as it is more reactive.
- We could have a white background colour and then still have white cards (we don't like that it looks like three separate cards).
- Instead of using soft edged card we can use square cards
- We can't add any new text or headings

So we need to keep all the headings and everything where it is, but just change the design of the page.

Cards needed to be re designed
